

Project Executable Files & Execution Guide

Date	26 June 2026
Team ID	SWTID-2026-9014
Project Name	AI Powered Advertisement Copy Generator
Maximum Marks	3 Marks

Project Executable Files & Execution Guide:

To successfully evaluate your project, evaluators require access to your source code, live deployments, and clear instructions on how to build and run your application locally. Complete the sections below to document your project repositories and execution steps.

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository (e.g., GitHub, GitLab)	https://github.com/abhisheksharmarj/AdForge-AI-Track-Project
Live Deployed Application	http://localhost:5000
Demo Video Link	https://drive.google.com/file/d/1dWqvgWMIiJQq0Ye6jnLbVowKSgmRs21Z/view?usp=drivesdk

Step 2: Key Executable Files & Folder Structure

Briefly explain the primary directories and where the core execution files are located within your repository.

S.No	Folder / File Name	Description & Purpose
1	<i>app.py</i>	<i>Main Flask application with all routes, prompt builders, Groq client, validation, and safety filter</i>
2	<i>templates/index.html</i>	<i>Complete single-page UI with Ad Generator, Refinement Engine, and Performance Tips panels</i>
3	<i>templates/about.html</i>	<i>About page</i>
4	<i>templates/how-itworks.html</i>	<i>How It Works page</i>
5	<i>static/css/style.css</i>	<i>Premium dark SaaS stylesheet with responsive design</i>
6	<i>static/js/script.js</i>	<i>Frontend controller with form handling, API calls, Markdown rendering, copy, and download</i>
7	<i>.env.example</i>	<i>Environment variable template</i>
8	<i>requirements.txt</i>	<i>Python dependency list</i>
9	<i>README.md</i>	<i>Full setup and usage documentation</i>

Step 3: Local Setup & Execution Instructions

Provide a step-by-step guide to installing dependencies and launching the application on a local machine.

Step	Action / Terminal Command	Expected Outcome / Notes
1	git clone	https://github.com/yourusername/adforge-ai.git Downloads the project to local machine
2	cd adforge	Navigate into the project folder
3	python -m venv venv	Creates a Python virtual environment inside the project folder
4	.\venv\Scripts\Activate.ps1	Activates the virtual environment — (venv) appears in terminal. On Mac/Linux use source venv/bin/activate
5	pip install -r requirements.txt	Installs all dependencies: Flask, Groq, python-dotenv, bleach, httpx
6	copy .env.example .env	Creates the .env file from the template
7	Add your Groq API key to .env — GROQ_API_KEY=gsk_XXXXXXXXXX	Get a free API key from https://console.groq.com — required for AI generation
8	python app.py	Starts the Flask development server on http://localhost:5000
9	Open browser → http://localhost:5000	AdForge AI is now running — fill the campaign brief and click Generate Ads
